

Speed Dials

Last Modified on 12/31/2020 2:26 pm EST

Speed Dials are used by the system to quickly dial either internal call flows or external telephone numbers. The **Speed Dial** menu as shown in Figure 01 below allows the Synkato System Administrator to create and manage the speed dials available within Synkato.

The screenshot displays the 'SPEED DIAL MANAGEMENT » ALL SPEED DIALS' interface. It features a search bar for 'Search Ring Groups' and a table with columns for 'Extension', 'Name', and 'Destination'. The table lists two speed dials: '2001' with destination '3174895544' and '6642' with destination 'Terminate Call'. A sidebar on the right contains a 'SPEED DIALS' menu with options to '+ Add New Speed Dial', '2001: Vendor Speed Dial2', and '6642: Vendor Speed Dial'. A 'Speed Dial Menu' bar is visible at the bottom.

Extension	Name	Destination
2001	Vendor Speed Dial2	3174895544
6642	Vendor Speed Dial	Terminate Call
