

# Number Manager Overview

Last Modified on 12/04/2019 9:52 am EST

The **Number Manager** is where all telephone numbers that are pointing to Kerauno must be built and provisioned. Any telephone number that needs to make inbound and outbound calls *must* be built in the **Number Manager**.

The **Number Manager** is located under the **System Admin > Number Manager** menu. When opening the **Number Manager**, administrators will be presented with a table of all currently provisioned telephone numbers in Kerauno. This table includes the telephone number itself, a short description, current start destination (set in **Call Routing**), as well as the trunk that the number is set to utilize.

The screenshot shows the 'Numbers' page in a web application. At the top, there is a search bar with a magnifying glass icon and the text 'Search Numbers'. Below the search bar is a table with four columns: 'Number', 'Description', 'Destination', and 'Trunk'. Each column header has a double-headed arrow icon indicating it is sortable. The table contains three rows of data:

Number	Description	Destination	Trunk
<a href="#">3171234567</a>	DID	☒ Terminate Call	AxiaTP / 198.91.76.80
<a href="#">3172255546</a>	Test Number	⌚ Time Condition test	AxiaTP / 198.91.76.80
<a href="#">3175555555</a>	Main Number	⌚ Time Condition Business Hours	

At the bottom of the screenshot, there is a dark grey bar with the text 'Figure 01: Number Manager'.

The fields in the table are sortable by **Number** or **Description** using the  symbol next to the column header. System Administrators may also search for a particular number by utilizing the search bar at the top of the table.
